## Surgical Pathology Report

### Final Diagnosis

**1.) Endocervix, currettings:**

**Benign endocervical tissue.**

**2.) Cervix, LEEP:**

**Moderate squamous dysplasia/CIN II, with background HPV effect.**

**Endocervical and ectocervical margins both judged negative for squamous dysplasia.**

**No evidence of severe squamous dysplasia or carcinoma.**

David D. Wang, M.D., PhD. Electronically Signed 8/6/2009

CLINICAL IMPRESSION: PAP 6/23/09 ASCUS

### Microscopic Description

1.) See descriptive diagnosis above.

2.) See descriptive diagnosis above.

### Gross Description

1.) Received in formalin, is a collection of bloody mucoïd material measuring 15 mm in aggregate. Entirely submitted. (TS-1)

2.) Received in formalin, the specimen jar contains 1 piece of slightly rubbery tan tissue. The specimen measures 20 mm in size. The cervical mucosa is appreciated. The presumptive endocervical margin is inked red and the remainder margin is inked black. Radially sectioned and entirely submitted. (TS-4)
